JURIYA PROGRAMME
VCM SEASONAL MONITORING & COMMCARE BUILD SPECIFICATION

Interim 2026 Dry Season / Rainy Season Dry Run • Draft Version 1.0

1. Purpose

This document converts the reduced Business Development monitoring requirements into an operational specification for Value Chain Managers (VCMs) and a build specification for CommCare coders. It is intended as an interim manual/digital process until the dedicated VCM Management Application is operational.

Please note that: VCMs are to become trusted business partners and advisors—not just data collectors.

The document separates the business requirement, the VCM activity, the verification evidence, and the CommCare data fields.

For **~~₦~~10,000**, these are the services VCM's are contracted to provide during one farming season to **100** farmers:

- **Service 1** – Conduct pre-season planning with assigned farmers.
- **Service 2** – Verify planting.
- **Service 3** – Assess germination.
- **Service 4** – Monitor crop management.
- **Service 5** – Verify harvest.
- **Service 6** – Support aggregation.
- **Service 7** – Capture marketing outcomes.

Each service then has:

1. Deliverables
2. Evidence required
3. Time window
4. Expected standard
5. Payment weight

2. Operating Principles

- Monitor only critical seasonal decision points; avoid overloading VCMs with excessive forms.
- Use GPS for all farm visits where field verification is required.
- Allow calls or group meetings where direct farm verification is not necessary.
- Pay VCMs for documented service delivery and legitimate attempts, not only for perfect outcomes outside their control.
- Capture data once in CommCare and reuse it for farmer support, aggregation, reporting, and VCM performance scoring.

3. Seasonal Monitoring Calendar

Stage	Activity IDs	Purpose	Main method
Pre-season	PS-01 to PS-04	Crop plan, seed, finance/input needs, farm location	Call / group meeting / farm visit
Early season	ES-01 to ES-03	Land preparation, planting, germination	GPS farm visit
Mid-season	MS-01 to MS-04	Bio-input supply/application, farm practices, crop condition	Call / record review / GPS farm visit
Late season	LS-01 to LS-02	Harvest start and harvest quantity	Call / GPS farm visit
End season	END-01 to END-03	Storage, aggregation, Juriya market sales outcome	Storage/aggregation visit, record review, call

4. Required Activity and Verification Matrix

Control table for Business Development and CommCare coders to enforce required evidence.

ID	Stage	Required activity	Phone / meeting	Visit	GPS	Photo	Points
PS-01	Pre-season	Farmer crop plan confirmation	✓				5
PS-02	Pre-season	Seed requirement and availability	✓				5
PS-03	Pre-season	Finance and input requirement assessment	✓				5
PS-04	Pre-season	Farm location and farmer status verification		✓	✓		5
ES-01	Early season	Land preparation confirmation		✓	✓	Recommended	6
ES-02	Early season	Planting verification		✓	✓	Recommended	10
ES-03	Early season	Germination assessment		✓	✓	Recommended	10
MS-01	Mid-season	Bio-input supply confirmation	✓	✓			5
MS-02	Mid-season	Bio-input application verification		✓	✓	Recommended	7
MS-03	Mid-season	Farm management practice monitoring		✓	✓		8
MS-04	Mid-season	Crop condition and risk assessment		✓	✓	Recommended	7
LS-01	Late season	Harvest start confirmation	✓	✓			5
LS-02	Late season	Harvest quantity verification		✓	✓	Recommended	10
END-01	End season	Storage confirmation		✓	✓	Recommended	5
END-02	End season	Aggregation record	✓	✓			4
END-03	End season	Juriya market sales outcome	✓	✓			3

5. Detailed Activity Specification

PS-01: Farmer crop plan confirmation

Item	Specification
Stage	Pre-season
Objective	Confirm what each assigned farmer intends to grow and the area planned for cultivation.
Monitoring method	Call / group meeting
Timing / trigger	Before land preparation begins
Core information to capture	Farmer ID; MTG / farm group; Primary crop; Secondary/intercrop; Variety; Planned area; Expected planting date; Expected harvest period
Evidence / verification	Farmer confirmation or group register
Management indicator produced	% farmers with confirmed crop plans
Payment weighting	5 points out of 100

PS-02: Seed requirement and availability

Item	Specification
Stage	Pre-season
Objective	Estimate seed demand and identify farmers without adequate seed before planting.
Monitoring method	Call / group meeting
Timing / trigger	Pre-season planning window
Core information to capture	Seed type; Variety; Quantity required; Quantity already available; Seed source; Seed quality/organic status; Gap requiring support
Evidence / verification	Farmer confirmation / seed record
Management indicator produced	Total seed demand and seed gap
Payment weighting	5 points out of 100

PS-03: Finance and input requirement assessment

Item	Specification
Stage	Pre-season
Objective	Confirm individual and group-level finance/input needs for farming operations.
Monitoring method	Call / group meeting
Timing / trigger	Before input procurement or bank support
Core information to capture	Credit required?; Amount required; Purpose of finance; Inputs required; Estimated input cost; Input already secured; Support source
Evidence / verification	Farmer confirmation / MTG record
Management indicator produced	Finance demand and input demand by MTG
Payment weighting	5 points out of 100

PS-04: Farm location and farmer status verification

Item	Specification
Stage	Pre-season
Objective	Confirm the farmer is active and the farm/plot to be monitored exists and is accessible.
Monitoring method	Farm visit
Timing / trigger	Before or at start of season
Core information to capture	Farm status; Plot location; GPS point; Farm accessibility; Approx. area; Farmer still participating?; Access/security issue
Evidence / verification	GPS + visit record
Management indicator produced	% assigned farmers with verified farm locations
Payment weighting	5 points out of 100

ES-01: Land preparation confirmation

Item	Specification
Stage	Early season
Objective	Confirm the farm was prepared and ready for planting.
Monitoring method	Farm visit
Timing / trigger	After land preparation / before or soon after planting
Core information to capture	Land preparation date; Method used; Area prepared; Soil conservation practice used?; Constraints observed
Evidence / verification	GPS + optional photo
Management indicator produced	% farms prepared on time
Payment weighting	6 points out of 100

ES-02: Planting verification

Item	Specification
Stage	Early season
Objective	Confirm planting occurred and establish the official planting date and seed quantity used.
Monitoring method	Farm visit
Timing / trigger	Within 7–14 days of planting
Core information to capture	Planting date; Crop planted; Variety; Seed quantity planted; Area planted; Planting method; Any gap vs plan
Evidence / verification	GPS + photo recommended
Management indicator produced	% farmers planted; average planting date
Payment weighting	10 points out of 100

ES-03: Germination assessment

Item	Specification
Stage	Early season
Objective	Assess crop establishment and identify early crop failure or replanting needs.
Monitoring method	Farm visit
Timing / trigger	7–21 days after planting, depending on crop
Core information to capture	Germination rating; Estimated germination %; Stand count method used?; Problem observed; Replanting required?; VCM advice given
Evidence / verification	GPS + photo recommended
Management indicator produced	% farms with satisfactory germination
Payment weighting	10 points out of 100

MS-01: Bio-input supply confirmation

Item	Specification
Stage	Mid-season
Objective	Record whether bio-inputs or approved inputs were supplied to the farmer/MTG.
Monitoring method	Call / record review / visit
Timing / trigger	When inputs are supplied
Core information to capture	Input type; Quantity supplied; Date supplied; Supplier/source; Farmer received?; Recipient confirmation

Evidence / verification	Farmer/MTG confirmation
Management indicator produced	Quantity of bio-input supplied
Payment weighting	5 points out of 100

MS-02: Bio-input application verification

Item	Specification
Stage	Mid-season
Objective	Confirm supplied inputs were actually applied and record application quantity and timing.
Monitoring method	Farm visit
Timing / trigger	Within target application window
Core information to capture	Input applied?; Application date; Quantity applied; Area treated; Application method; Reason not applied
Evidence / verification	GPS + optional photo
Management indicator produced	% supplied inputs applied correctly
Payment weighting	7 points out of 100

MS-03: Farm management practice monitoring

Item	Specification
Stage	Mid-season
Objective	Track key management practices such as weeding, thinning, gap filling and pest/disease control.
Monitoring method	Farm visit
Timing / trigger	Mid-season crop management window
Core information to capture	Weeding done?; Thinning done?; Gap filling done?; Mulching/pruning done?; Pest/disease control done?; Date of last practice; Constraints
Evidence / verification	GPS + observation
Management indicator produced	% farms completing core practices
Payment weighting	8 points out of 100

MS-04: Crop condition and risk assessment

Item	Specification
Stage	Mid-season
Objective	Provide early warning on crop condition, pest/disease, drought, flood, livestock or security damage.
Monitoring method	Farm visit
Timing / trigger	Mid-season and as needed
Core information to capture	Crop condition rating; Main risk observed; Severity; Area affected; Action advised; Escalation needed?
Evidence / verification	GPS + optional photo
Management indicator produced	% farms at risk; issue distribution
Payment weighting	7 points out of 100

LS-01: Harvest start confirmation

Item	Specification
Stage	Late season
Objective	Confirm when harvesting starts and whether harvest is partial, ongoing or completed.
Monitoring method	Call / visit
Timing / trigger	At expected harvest period
Core information to capture	Harvest started?; Harvest start date; Harvest status; Crop being harvested; Expected completion date
Evidence / verification	Farmer confirmation
Management indicator produced	% farmers that have started harvest
Payment weighting	5 points out of 100

LS-02: Harvest quantity verification

Item	Specification
Stage	Late season
Objective	Estimate or verify crop output from the farmer's monitored plot.
Monitoring method	Farm visit
Timing / trigger	During or immediately after harvest
Core information to capture	Crop harvested; Quantity harvested; Measurement unit; Area harvested; Moisture/quality observation; Harvest complete?
Evidence / verification	GPS + photo recommended
Management indicator produced	Total production; yield per farmer/ha
Payment weighting	10 points out of 100

END-01: Storage confirmation

Item	Specification

Stage	End season
Objective	Confirm harvested produce is safely stored, labelled and traceable to the farmer/MTG.
Monitoring method	Farm/storage visit
Timing / trigger	After harvest before aggregation/sale
Core information to capture	Stored?; Storage location; Crop labelled?; Quantity stored; Storage condition; Loss/damage observed
Evidence / verification	Visit record + optional photo
Management indicator produced	Quantity stored and storage compliance
Payment weighting	5 points out of 100

END-02: Aggregation record

Item	Specification
Stage	End season
Objective	Track produce delivered into MTG/Juriya aggregation channels by farmer.
Monitoring method	Visit / aggregation record
Timing / trigger	On aggregation date
Core information to capture	Aggregation date; Collection point; Crop; Quantity delivered; Farmer contribution; MTG/group; Accepted/rejected quantity
Evidence / verification	Aggregation register / visit
Management indicator produced	Quantity aggregated per farmer/MTG
Payment weighting	4 points out of 100

END-03: Juriya market sales outcome

Item	Specification
Stage	End season
Objective	Measure the marketing outcome for produce sold through Juriya market or other channels.
Monitoring method	Record review / call / market visit
Timing / trigger	After sale
Core information to capture	Sale date; Crop sold; Quantity sold; Unit price; Total value received; Buyer/channel; Payment received?
Evidence / verification	Sales record / farmer confirmation
Management indicator produced	Average price; farmer revenue; % sold via Juriya
Payment weighting	3 points out of 100

6. CommCare Coding Specification

Recommended CommCare build approach: one farmer case, seasonal monitoring forms, and child/repeat groups for crop lines, input lines, aggregation lines, and sales lines where multiple records are possible.

6.1 CommCare Case Structure

Object	Recommended design	Notes
Farmer case	One case per crop tier per farmer per season	Farmer ID, name, phone, MTG, state, community, assigned VCM, season status
Farm plot repeat / child case	One or more plots per farmer where applicable	Plot ID, GPS, crop plan, area, accessibility
Seasonal activity forms	Separate forms for each stage	Pre-season, early season, mid-season, late season, end-season
Aggregation/sales records	Repeat group or child case	Multiple sales or aggregation events per farmer/crop

6.2 Required Forms

Form ID	Form name	Activities covered	Case action	Verification
VCM-01	Pre-season farmer planning	PS-01, PS-02, PS-03	Farmer case update	Phone / meeting
VCM-02	Farm location verification	PS-04	Farmer/plot case update	GPS farm visit
VCM-03	Land preparation and planting verification	ES-01, ES-02	Season form	GPS farm visit
VCM-04	Germination assessment	ES-03	Season form	GPS farm visit
VCM-05	Mid-season input and farm management monitoring	MS-01 to MS-04	Season form	Mixed: call/visit
VCM-06	Harvest verification	LS-01, LS-02	Season form	Call/visit
VCM-07	Storage, aggregation and sales outcome	END-01 to END-03	Season form / repeat records	Visit/record review

6.3 Developer Rules and Validations

Rule area	Coding instruction
GPS requirement	If activity method is farm visit, GPS must be captured before submission.
Photo rule	Photo should be required for planting, germination, harvest verification if Business Process wants tighter verification; otherwise mark recommended.
Date validations	Activity date cannot be in the future; planting date should not be after germination date; harvest date should not be before planting date.

Quantity validations	Seed, input, harvest, aggregation and sales quantities must be numeric and greater than or equal to zero.
Unit standardisation	Use controlled units: kg, bags, mudu, tonnes, litres, sachets, bundles. Include conversion guidance where possible.
Skip logic	If crop not planted, skip germination details and require reason; if no sale occurred, skip price fields and require expected sale channel/date.
Attempt status	Every activity should capture status: Completed, Farmer unavailable, Farm inaccessible, Farmer refused, Crop/farm abandoned, No attempt made.
Payment scoring	Completed or legitimate attempted status counts toward service score if required evidence/reason is captured. No attempt made scores zero.

7. Field Dictionary for CommCare

Activity ID	Activity	Field label	CommCare type	Required?	Notes
PS-01	Farmer crop plan confirmation	Farmer ID	text	Yes	Use controlled list where possible
PS-01	Farmer crop plan confirmation	MTG / farm group	text	Conditional	Use controlled list where possible
PS-01	Farmer crop plan confirmation	Primary crop	select_one	Conditional	Use controlled list where possible
PS-01	Farmer crop plan confirmation	Secondary/intercrop	select_one	Conditional	Use controlled list where possible
PS-01	Farmer crop plan confirmation	Variety	select_one	Conditional	Use controlled list where possible
PS-01	Farmer crop plan confirmation	Planned area	decimal	Conditional	Use controlled list where possible
PS-01	Farmer crop plan confirmation	Expected planting date	date	Conditional	Use controlled list where possible
PS-01	Farmer crop plan confirmation	Expected harvest period	date	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Seed type	select_one	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Variety	select_one	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Quantity required	decimal	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Quantity already available	decimal	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Seed source	select_one	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Seed quality/organic status	select_one	Conditional	Use controlled list where possible
PS-02	Seed requirement and availability	Gap requiring support	text	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Credit required?	select_one yes_no	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Amount required	decimal	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Purpose of finance	text	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Inputs required	select_one yes_no	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Estimated input cost	decimal	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Input already secured	text	Conditional	Use controlled list where possible
PS-03	Finance and input requirement assessment	Support source	select_one	Conditional	Use controlled list where possible
PS-04	Farm location and farmer status verification	Farm status	select_one	Conditional	Use controlled list where possible
PS-04	Farm location and farmer status verification	Plot location	text	Conditional	Use controlled list where possible
PS-04	Farm location and farmer status verification	GPS point	geopoint	Yes	Use controlled list where possible
PS-04	Farm location and farmer status verification	Farm accessibility	text	Conditional	Use controlled list where possible
PS-04	Farm location and farmer status verification	Approx. area	decimal	Conditional	Use controlled list where possible
PS-04	Farm location and farmer status verification	Farmer still participating?	select_one yes_no	Conditional	Use controlled list where possible
PS-04	Farm location and farmer status verification	Access/security issue	text	Conditional	Use controlled list where possible
ES-01	Land preparation confirmation	Land preparation date	date	Conditional	Use controlled list where possible
ES-01	Land preparation confirmation	Method used	select_one	Conditional	Use controlled list where possible
ES-01	Land preparation confirmation	Area prepared	decimal	Conditional	Use controlled list where possible
ES-01	Land preparation confirmation	Soil conservation practice used?	select_one yes_no	Conditional	Use controlled list where possible
ES-01	Land preparation confirmation	Constraints observed	text	Conditional	Use controlled list where possible
ES-02	Planting verification	Planting date	date	Yes	Use controlled list where possible
ES-02	Planting verification	Crop planted	select_one	Yes	Use controlled list where possible
ES-02	Planting verification	Variety	select_one	Conditional	Use controlled list where possible
ES-02	Planting verification	Seed quantity planted	decimal	Conditional	Use controlled list where possible
ES-02	Planting verification	Area planted	decimal	Conditional	Use controlled list where possible
ES-02	Planting verification	Planting method	select_one	Conditional	Use controlled list where possible
ES-02	Planting verification	Any gap vs plan	text	Conditional	Use controlled list where possible
ES-03	Germination assessment	Germination rating	select_one	Conditional	Use controlled list where possible
ES-03	Germination assessment	Estimated germination %	decimal	Conditional	Use controlled list where possible
ES-03	Germination assessment	Stand count method used?	select_one yes_no	Conditional	Use controlled list where possible
ES-03	Germination assessment	Problem observed	text	Conditional	Use controlled list where possible
ES-03	Germination assessment	Replanting required?	select_one yes_no	Conditional	Use controlled list where possible
ES-03	Germination assessment	VCM advice given	text	Conditional	Use controlled list where possible
MS-01	Bio-input supply confirmation	Input type	select_one	Conditional	Use controlled list where possible
MS-01	Bio-input supply confirmation	Quantity supplied	decimal	Conditional	Use controlled list where possible
MS-01	Bio-input supply confirmation	Date supplied	date	Conditional	Use controlled list where possible
MS-01	Bio-input supply confirmation	Supplier/source	select_one	Conditional	Use controlled list where possible
MS-01	Bio-input supply confirmation	Farmer received?	select_one yes_no	Conditional	Use controlled list where possible
MS-01	Bio-input supply confirmation	Recipient confirmation	text	Conditional	Use controlled list where possible
MS-02	Bio-input application verification	Input applied?	select_one yes_no	Conditional	Use controlled list where possible
MS-02	Bio-input application verification	Application date	date	Conditional	Use controlled list where possible
MS-02	Bio-input application verification	Quantity applied	decimal	Conditional	Use controlled list where possible
MS-02	Bio-input application verification	Area treated	decimal	Conditional	Use controlled list where possible
MS-02	Bio-input application verification	Application method	select_one	Conditional	Use controlled list where possible
MS-02	Bio-input application verification	Reason not applied	select_one yes_no	Conditional	Use controlled list where possible
MS-03	Farm management practice	Weeding done?	select_one yes_no	Conditional	Use controlled list where possible

	monitoring				
MS-03	Farm management practice monitoring	Thinning done?	select_one yes_no	Conditional	Use controlled list where possible
MS-03	Farm management practice monitoring	Gap filling done?	select_one yes_no	Conditional	Use controlled list where possible
MS-03	Farm management practice monitoring	Mulching/pruning done?	select_one yes_no	Conditional	Use controlled list where possible
MS-03	Farm management practice monitoring	Pest/disease control done?	select_one yes_no	Conditional	Use controlled list where possible
MS-03	Farm management practice monitoring	Date of last practice	date	Conditional	Use controlled list where possible
MS-03	Farm management practice monitoring	Constraints	text	Conditional	Use controlled list where possible
MS-04	Crop condition and risk assessment	Crop condition rating	select_one	Conditional	Use controlled list where possible
MS-04	Crop condition and risk assessment	Main risk observed	select_one	Conditional	Use controlled list where possible
MS-04	Crop condition and risk assessment	Severity	select_one	Conditional	Use controlled list where possible
MS-04	Crop condition and risk assessment	Area affected	decimal	Conditional	Use controlled list where possible
MS-04	Crop condition and risk assessment	Action advised	text	Conditional	Use controlled list where possible
MS-04	Crop condition and risk assessment	Escalation needed?	select_one yes_no	Conditional	Use controlled list where possible
LS-01	Harvest start confirmation	Harvest started?	select_one yes_no	Conditional	Use controlled list where possible
LS-01	Harvest start confirmation	Harvest start date	date	Conditional	Use controlled list where possible
LS-01	Harvest start confirmation	Harvest status	select_one	Conditional	Use controlled list where possible
LS-01	Harvest start confirmation	Crop being harvested	select_one	Conditional	Use controlled list where possible
LS-01	Harvest start confirmation	Expected completion date	date	Conditional	Use controlled list where possible
LS-02	Harvest quantity verification	Crop harvested	select_one	Conditional	Use controlled list where possible
LS-02	Harvest quantity verification	Quantity harvested	decimal	Yes	Use controlled list where possible
LS-02	Harvest quantity verification	Measurement unit	text	Conditional	Use controlled list where possible
LS-02	Harvest quantity verification	Area harvested	decimal	Conditional	Use controlled list where possible
LS-02	Harvest quantity verification	Moisture/quality observation	text	Conditional	Use controlled list where possible
LS-02	Harvest quantity verification	Harvest complete?	select_one yes_no	Conditional	Use controlled list where possible
END-01	Storage confirmation	Stored?	select_one yes_no	Conditional	Use controlled list where possible
END-01	Storage confirmation	Storage location	text	Conditional	Use controlled list where possible
END-01	Storage confirmation	Crop labelled?	select_one yes_no	Conditional	Use controlled list where possible
END-01	Storage confirmation	Quantity stored	decimal	Conditional	Use controlled list where possible
END-01	Storage confirmation	Storage condition	text	Conditional	Use controlled list where possible
END-01	Storage confirmation	Loss/damage observed	text	Conditional	Use controlled list where possible
END-02	Aggregation record	Aggregation date	date	Conditional	Use controlled list where possible

8. VCM Performance and Payment Framework

Recommended payment method for the interim season: 100-point seasonal scorecard linked to the ₦10,000 Seasonal Monitoring Service Fee.

Activity status	Counts for payment?	Payment rule
Completed	Yes	Full points if required fields and evidence are submitted.
Farmer unavailable	Yes	Counts if call/visit attempt and reason are recorded.
Farm inaccessible	Yes	Counts if GPS/area evidence and reason are recorded where safe.
Farmer refused	Yes	Counts if refusal reason is captured and supervisor can review.
Crop/farm abandoned	Yes	Counts if abandonment is verified and reason recorded.
No attempt made	No	Scores zero for that activity.

Payment formula: Payment = (VCM points earned / 100) × ₦10,000.

Example: if a VCM earns 87 points, payment = 87/100 × ₦10,000 = ₦8,700.
